- Automatic processing
- Protection against spoilage
- Alarm messages sent to your Phone
- Convenient access via Telegram app
- Emails posted
- Not associated with Alexa, Siri or any other "Big Brother" spying app.

MEASUREMENT

ANALYSIS

## ASK US!

### PRODUCT DEVELOPMENT

The KoolBanana can have almost any type of sensor added to it.. We focus on temperature but almost any sensor can be monitored Ask us if you have your own need

## WHAT DOES KB DO?

KoolBanana has remote sensors connected. Usually they are temperature sensors but any sensor can be adapted which are constantly monitored and recorded.

Usually they are analysed against preset alarm values and can issue alerts. All measurements are sent to the KB database. It is fully automated

## HOW DOES KB WORK?

The KoolBanana uses a controller that connects to the internet via a local WiFi. Connected sensors are located where they are needed. A simple telephone style cable links them to the controller. A total of 20 sensors per controller.

The KB controller uses Telegram, emails and it's website to communicate. The KB controller also has a bright, coloured LED to provide feedback even, if the internet is down.

## WHERE DO I USE KB ?

- Food display cabinets
- Fridges
- Coolrooms
- Freezers
- Bain Marie
- Refridgerated vehicles
- Door monitoring
- Power monitoring
